

## COVID-19

# Isolation in the event of a positive antigen rapid test carried out by qualified personnel or commissioned third parties

## Supplementary information to the announcement of the Bavarian State Ministry of Health and Care of 12 April 2022, ref. G51v-G8000-2022/44-242

All over the world, the COVID-19 pandemic is causing anxiety. There are many cases where infection with the coronavirus SARS-CoV-2 known as COVID-19 produces mild symptoms similar to those of a common cold with a cough, fever, headache, aching limbs or rhinitis; loss of one's sense of smell or taste is also not infrequent. Some people, however, never develop symptoms ("asymptomatic course"). But the infection can also lead to severe symptoms. Persons with severe pre-existing health conditions who have not been vaccinated are, in particular, more vulnerable to this risk. To prevent infections and break chains of infection, isolation is of decisive importance.

### Isolation requirement

The following applies to all persons who have been notified that their test result of an antigen rapid test for SARS-CoV-2 was positive: You are obliged by state order to go into isolation. Make an appointment for a nucleic acid test, e.g. a PCR test, immediately in order to have the result of the rapid test confirmed.

The isolation requirement and the associated rules of conduct are laid down in the General Order of the Bavarian State Ministry of Health and Care on the Implementation of the Infection Protection Act (IfSG), the relevant part of which you have received together with this information.

Isolation will end if the nucleic acid test produces a negative result. If the result of the nucleic acid test is positive or if no result is available, isolation may be ended without a final test at the earliest after 5 days, provided that there have been no more signs of illness for at least 48 hours (freedom from symptoms). If, on day 5, freedom from symptoms has not existed for 48 hours, isolation must be continued. It will not end until freedom from symptoms has existed for at least 48 hours, but at the latest at the end of ten days after the virus was first detected by means of a certified antigen or PCR test.

### Important facts on conduct and hygiene

#### ▶ *Where does isolation take place?*

Isolation must take place at home or in another separate part of a building; most people choose to self-isolate at home. You must not leave this place during your isolation. However, you may occasionally and on your own go onto the balcony, the terrace or into your own garden, if your garden is directly adjoining the house and is not used communally.

#### ▶ *On your way to the PCR test:*

A nucleic acid test, e.g. a PCR test, is the most reliable method for diagnosing a coronavirus infection. That is why it is carried out to verify the result of the rapid antigen test. You are allowed to leave your home to take the nucleic acid test. Make sure that you get to the test point with as little contact as possible, and wear an FFP2 mask whilst you are away from home.

#### ▶ *Support from outside:*

Ask relatives who do not live in your household, friends or acquaintances for help, for example with shopping and important errands. There are also many volunteer services available throughout the country. Many of them are listed online together with their contact details, but local councils or your local health authority will also help you search for these services by telephone.

#### ▶ *Should your health deteriorate or should you need other medical help during your isolation,* please call your general practitioner, the emergency service of the Bavarian Association of Statutory Health Insurance Physicians (Kassenärztliche Vereinigung Bayerns) on **116 117** or the emergency doctor, if it is urgent. In your phone call, be sure to point out that you are in isolation because you are suspected of being infected with COVID-19. Please also inform the health authority.

## What rules must be observed during isolation?

During isolation, it is important to stay as far away as possible from other members of the household, even if you do not feel ill. That means, most importantly:

- ▶ **As few encounters as possible:**  
Reduce contact with your housemates and keep a distance of at least 1.5 metres. The encounters should be as brief as possible and everybody should wear a face mask.
- ▶ Contact with persons outside your household – for example postmen, delivery staff, neighbours, friends or acquaintances – should also be avoided. Ask for deliveries to be deposited in front of the entrance.
- ▶ Sleep in a separate room and also stay in a separate room on your own during the day. Shared rooms such as the kitchen and bathroom should be entered at different times, meals should not be taken together. Important: Air all rooms well!
- ▶ **For children, isolation is a particularly big challenge; the rules need to be adapted according to their age.**  
The health authority offers advice to families as to how best to organise isolation so that children and parents can deal well with this time together.
- ▶ **Thorough cleaning:** If the bathroom, toilet or kitchen are shared, the contact surfaces must be cleaned thoroughly after you have used them. Normal household cleaning products are adequate for this purpose. Each resident must have their own towels, which must be changed and washed regularly. Do not share household items such as crockery and clothing with other persons.

You can find the General Ruling Isolation together with translations and barrier-free explanations on our website  
<https://www.stmgp.bayern.de/coronavirus/rechtsgrundlagen/#AV-Isolation>

## What do your family and other house-mates need to know?

- ▶ **Relatives and other persons who live in your household during your isolation should be in good health and not have any pre-existing illnesses.** Elderly people and individuals with risk factors such as chronic illnesses or a weakened immune system should stay away during this time.
- ▶ **Watch for symptoms, minimise contact:**  
We request of anyone who shares a household with a person who is suspected of being infected with Corona due to a positive rapid test: please show personal responsibility!  
You should reduce your own contacts, carefully observe hygiene rules, watch out for symptoms of illness and get tested.

## Important hygiene rules

- ▶ **Cough and sneeze with caution**  
Keep as much distance as possible, turn away from other people and cough or sneeze into the crook of your arm or a disposable handkerchief which you then immediately dispose of in a sealable rubbish bag.
- ▶ **Hand hygiene**  
Do not shake hands or hold hands with others. Regularly and thoroughly wash your hands with soap and water for at least 20 to 30 seconds, especially
  - after blowing your nose, sneezing or coughing,
  - before preparing food,
  - before eating,
  - after going to the toilet,
  - whenever your hands are visibly dirty,
  - before and after any contact with other persons,
  - above all, after any contact with a person carrying the disease, or with that person’s direct surroundings.

You can use alcohol-based hand disinfectants that are gentle on the skin if there is no visible dirt. Make sure that the disinfectant is designated as having “limited virucidal activity”, “limited virucidal activity PLUS” or “virucidal activity”.

**All the best for your health!**
